I. WAGE AND SALARY EARNERS IN EMPLOYMENT

The series contained in this section, except for those relating to government employees and defence forces, are based on comprehensive data (referred to herein as "benchmarks") derived for the purpose from the population censuses of June 1954 and June 1961. For the intercensal period 1954-1961 and from July 1961 to date the figures shown are estimates designed to measure month-to-month changes in the sector of employment to which the benchmarks relate.

2. Between population censuses the employment data are obtained from three main sources, namely, (a) current pay-roll tax returns; (b) current returns from government bodies; and (c) some other direct current records of employment (e.g. for hospitals). The total of recorded employment is supplemented each month by estimates of changes in the number of wage and salary earners not covered by the foregoing collections.

3. The series relate only to wage and salary earners. They therefore exclude employers, self-employed persons and unpaid helpers. Also excluded, because of the inadequacy of current data, are employees in rural industry and in private domestic service.

4. Pay-roll tax returns are lodged at present by all employers paying more than \$400 a week in wages (other than certain Commonwealth Government bodies, religious and benevolent institutions, public hospitals and other similar organisations specifically exempted under the Pay-roll Tax Assessment Act 1941-1967). At June 1954, this Act required employers paying wages of more than \$160 a week to lodge returns. The exemption limit was raised to \$240 a week as from 1 September 1954 and to the present level as from 1 September 1957.

5. The benchmark figures were derived from particulars recorded for individuals on population census schedules, while the estimated monthly figures are derived mainly from reports supplied by employers, relating to enterprises or establishments. Because the two sources differ in some cases in scope and in the reporting of industry, the industry dissection of the benchmark totals was adjusted to conform as closely as possible to an enterprise/establishment reporting basis. The industry classification used throughout the series is that of the population census of June 1961.

6. At the 1954 and 1961 population censuses those persons who were not stated to be engaged in an industry, business, profession, trade or service were required to be described as students, pensioners, engaged in home duties, etc. and were automatically classified as not being in the work force. It is believed that many persons - particularly married women - classified themselves according to their main or usual activity or status (e.g. home duties) and overlooked any part-time or casual employment that they may have had at the time of the census. Had the census questions been designed to obtain particulars of each person's actual activity during a specified period (as the 1966 population census work force questions were), so that all employees who did any paid work at all would have been included, these persons would have been counted in the total of employed wage and salary earners.

7. The scope of the current monthly series is similar to and subject to the same limitations as that of the population census benchmarks. For this reason the totals shown in this section for Australia, for States and Territories, and for industries, do not necessarily represent, at any point of time, the total numbers of wage and salary earners employed full-time or part-time in those areas or industries.

Instead, they represent the estimated numbers of persons who would have been counted as wage and salary earners at a population census in which the concepts and definitions were the same as those of the 1961 census.

8. On the other hand, the concepts and definitions adopted at the 1966 population census conformed closely to the recommendations of the Eighth International Conference of Labour Statisticians, all persons who did any paid work for an employer or who had a job as an employee from which they were temporarily absent being included in the total of employed wage and salary earners. As a result, the estimates for June 1966 shown in this bulletin will differ from the corresponding census figures. The monthly estimates are also different in concept from the estimates obtained by means of the quarterly work force survey (see definitions in Section III).

9. Current data supplied by reporting enterprises or establishments generally refer to persons on the payroll for the last pay-period in each month. Persons who are on paid leave or who work during part of the pay-period and are unemployed or on strike during the rest of the period are generally counted as employed. Those not shown on employers' payrolls because they are on leave without pay, on strike or stood down for the entire period are excluded. Because of the special nature of the stevedoring industry, the number of waterside workers included in the estimates represents average employment during the month.

10. Although the level of the estimates in this bulletin may be affected by the exclusion of many part-time employees from the 1954 and 1961 census benchmarks, nevertheless it is considered that they measure reasonably well the short-term trends in employment in the defined field. However, they may be less reliable for longer-term measurement. Because of conceptual differences between benchmark and payroll data, changes in such factors as labour turnover, multiple jobholding and part-time working are all apt to affect the trend during intercensal periods.

11. Particulars of the principal series of estimates of wage and salary earners in employment have also been published in the following special bulletins:

S.B. 412 Wage and Salary Earners in Employment, June 1954 to
June 1961

S.B. 295 Wage and Salary Earners in Employment, June 1961 to
June 1965

Some of the figures for the period January 1964 to June 1965 shown in S.B. 295 have since been revised. Revisions to totals and to industry group figures for Australia were published in the June 1966 issue of "Employment and Unemployment".

12. This bulletin includes seasonally adjusted figures for selected employment series for Australia - see Table 2, page 5. Details of the methods used in seasonally adjusting these and other series are given in "Seasonally Adjusted Indicators 1967," issued on 18 July 1967.

NOTE. Any discrepancies between totals and sums of components in tables are due to rounding.

(a) Permanent Defence Forces in Australia and overseas. From July 1965, includes national servicemen enlisted in the Regular Army supplement. Where the intake occurred at the end of the month, national servicemen have been included in the defence forces figures in the following month. (National Service trainees in camp under the former training scheme, applicable from July 1951 to November 1959, are not included.) (b) Affected by industrial disputes. r - revised.

Persons	47.5	18.7	19.7	5.0	5.6	2.5	0.1	..	99.1
Total Government (b) -									
Males	272.4	198.8	107.8	73.1	59.7	25.3	5.2	16.3	758.6
Females	77.0	55.7	23.6	23.0	15.7	6.8	1.9	8.2	211.8
Persons	349.4	254.5	131.4	96.1	75.4	32.1	7.0	24.5	970.4

(a) See note (a) to Table 7. Excludes State and Local Government employees (3.5 thousand persons in June 1967) engaged in rural industry, or in private homes as employees of government emergency housekeeper services. Also excludes defence forces (see Table 1 on page 4). (b) Includes semi-government bodies.

II. EMPLOYEES IN LARGER PRIVATE FACTORIES

The employment figures in this section are obtained by means of a survey of larger private factories undertaken by joint arrangement between the Department of Labour and National Service and this Bureau. The survey covers practically all private factories with 100 or more employees and a large section of those with between 50 and 100 employees.

2. The results of the survey give an earlier indication of current monthly trends in private factory employment than is available from any other source, and the trends in employment in these larger private factories are broadly consonant with those shown by the subsequent estimates of total private factory employment. It should be noted, however, that the figures in this section include persons on strike but exclude persons stood down as a result of an industrial dispute. To this extent they differ from the employment estimates in Section I of this bulletin. The latter exclude all persons who, as a result of an industrial dispute, are not shown on employers' payrolls.

3. Employers co-operating in the survey are asked to supply, as at the last pay-day in the month, the number of employees in the factory or on the factory office staff, providing their employment is directly related to manufacture. Selling and distribution staff are excluded.

4. Employment in factories in the industry group "food, drink and tobacco" is subject to considerable seasonal fluctuation. In order to isolate the effect of such seasonal movements, separate tables have been included in this section to show the movement in employment in factories other than food, drink and tobacco factories.

5. In order to keep the survey as representative as possible, the list of factories included is revised at the beginning of each year. When comparing employment figures for different periods it should be noted that at any point of time a continuous monthly series on a uniform basis is available only from January of the previous year.

III. CIVILIAN WORK FORCE - SIX STATE CAPITAL CITIES

1. Introduction. Estimates of the Civilian Work Force in this section are based on results of surveys of a sample of households selected by area sampling methods in the six Australian State capital cities. The first survey was conducted in November 1960, and surveys have been conducted at quarterly intervals since that date. The surveys are conducted in February, May, August and November each year. The survey information is obtained by personal interview at about 19,500 sample households which are visited during a four-week period each quarter by specially trained enumerators. Each person included in the surveys is classified by work force characteristics on the basis of his actual activity during the previous week as reported to the enumerator.

2. Population Coverage. The sample used in the surveys covers the metropolitan areas, comprising the six Australian State capital cities as defined for statistical purposes. The surveys are currently in process of extension to non-metropolitan areas. The enumeration includes all persons, 15 years of age and over, living in selected households, with the exception of (a) members of the permanent armed services and national servicemen enlisted in the Regular Army Supplement, and (b) non-Australian diplomatic staff and non-Australian members of their households. Prior to August 1966 persons aged 14 were within the scope of the surveys. See page 22.

3. Classification of the Work Force. The classification used in the surveys conforms closely to that recommended by the Eighth International Conference of Labour Statisticians held in Geneva in 1954. In this classification, the work force category to which an individual is assigned depends on his actual activity (i.e. whether working, looking for work, etc.) for a specified week during the four-week period covered by the surveys. A person's activity during the specified week is determined from answers given to a set of questions specially designed for this purpose. The principal categories appearing in the tables in this bulletin are the employed and unemployed, which together constitute the work force, and the remainder who are not in the work force. Details of the classification used are as follows.

(i) Employed Persons. All those who, during the specified week,

- (a) did any work for pay, profit, commission or payment in kind, in a job or business, or on a farm (the category includes employees, employers and workers on own account), or
- (b) worked 15 hours or more without pay in a family business (or farm), or
- (c) had a job, business or farm, but were not at work because of illness, accident, leave or holiday, industrial dispute or because of production hold-up due to bad weather, plant breakdown, etc.

Persons who had a job but were temporarily laid off by their employers for the whole week without pay are excluded, and are classified in the tables as unemployed. Persons who did some work during the week, however, before they either lost their jobs or were laid off, are classified as employed.

(ii) Unemployed Persons. All those who, during the specified week, did no work at all, and

- (a) did not have a job or business and were looking for work (including those who stated that they would have looked for work had they not been temporarily ill, and those who would have looked for work had they not already made definite arrangements to start work in a new job after the specified week), or
- (b) were laid off from their jobs without pay for the whole week.

Persons who either lost their jobs or were laid off during the specified week, but did some work during that week, are classified as employed.

- (iii) The Work Force. Comprises all persons, who, during the specified week, were employed or unemployed as defined in (i) and (ii) above.
- (iv) Persons Not in the Work Force. Those who, during the specified week, were not classified as employed or unemployed. This category therefore includes persons without a job, business or farm and not looking for work, who, during the specified week, were:

keeping house (unpaid)
 attending a school or university
 retired or voluntarily idle
 permanently unable to work
 inmates of institutions.

4. Nature of Estimates. Since the survey estimates are based on a sample they are subject to sampling variability, that is, variations that might occur by chance because only a sample of the population is enumerated. Further information on variability of survey estimates is available on request.

In addition to the factors referred to above, the attention of users of the statistics in this section is directed to the fact that figures in Table 15 are rounded but not adjusted to add to totals because such adjustment would, in some cases, exceed the sampling variability of the estimate and tend to destroy its value as an indicator of movement.

NOTE. A brief summary of the results of work force surveys for the period February 1964 to May 1967 is given in Tables 15 and 16. More detailed figures were published in the May 1967 issue of this bulletin.

CHANGE IN THE AGE RANGE COVERED IN THE SURVEYS

To take account of changes in the school leaving age, and to bring the work force survey definitions into conformity with those of the 1966 Population Census, the scope of the surveys has been restricted, as from August 1966, to civilians aged 15 years and over. In Tables 15 and 16, figures for periods prior to August 1966 have been revised to a basis comparable with that for August 1966, i.e. to exclude persons aged 14. Revised figures for earlier periods (prior to February 1964) are available on request.

(a) Persons who claimed, when registering with the Commonwealth Employment Service, that they were not employed and who were recorded as unplaced. Includes those referred to employers and those who may have obtained employment without notifying the C.E.S. Includes also persons receiving unemployment benefit (see Table 18). (b) Includes the Australian Capital Territory. (c) Includes the Northern Territory. (d) For details of the methods used in seasonally adjusting these and other series see "Seasonally Adjusted Indicators 1967".
